SUMMARY

ICT and cybersecurity graduate completing a Master of Information Technology (Network and Cybersecurity Systems) at Flinders University, with over a year of enterprise experience in SAP access control, security governance and compliance auditing at Accenture. Hands-on experience across cybersecurity, networking, software development, cloud technologies, testing and secure application environments, supported by strong problem-solving, teamwork and stakeholder communication. Familiar with the SA Cyber Security Framework (SACSF), ASD Essential Eight, ISO/IEC 27001 and Australian cyber and privacy obligations.

Work rights: Subclass 500 (Student) visa, with application for Subclass 485 (Temporary Graduate) planned for January 2027.

TECHNICAL SKILLS

Security & Risk: Governance, Risk and Compliance (GRC), Information Security Frameworks (SACSF, ASD Essential Eight, ISO/IEC 27001), Risk Management, Incident Response, Business Continuity, Zero Trust Architecture, Access Management, Compliance Auditing, SOC Automation, Threat Intelligence (MITRE ATT&CK), Anomaly Detection

Networking: Routing & Switching, Network Security Monitoring, Wireshark Packet Analysis, Cisco

Software Development: Python, SQL, PHP, JavaScript, HTML/CSS

Microsoft & Cloud: Microsoft 365, Microsoft Azure (foundational experience), Active Directory, Microsoft Power Platform (Power Apps, Power Automate, Power BI), AWS EC2, IBM Cloudant, IT Infrastructure

Enterprise Systems: SAP ECC, S/4HANA, Fiori, Identity & Access Management, Role Administration

ICT & Digital Delivery: Business Applications, IT Infrastructure, ICT Project Delivery, Cyber Security Resilience

Professional Skills: Problem Solving, Teamwork, Stakeholder Communication, Organisation, Time Management, Adaptability

EDUCATION

Master of Information Technology (Network and Cybersecurity Systems) *Expected: Dec 2026*
Flinders University, Adelaide, South Australia

Bachelor of Science, Computer Science with Network Security *Graduated: Dec 2023*
University of Technology, Mauritius

PROJECTS

Microsoft Power Platform - Cybersecurity Incident Management App 2026
Personal ICT & Cybersecurity Project

- Built a Power Apps application to submit, track and triage cybersecurity incidents.
- Automated severity-based notifications and escalation workflows using Power Automate.
- Created Power BI dashboards for incident status, severity and trends, with access-control considerations for sensitive data.

AI-Driven SOC Home Lab — Multi-Attack Detection & Automated Threat Intelligence 2026
Personal Cybersecurity Project

- Built an end-to-end SOC workflow covering packet capture, detection, alerting and AI-assisted threat classification.
- Developed Python detection modules for security threats and vulnerabilities, including SSH brute-force and ICMP flood/reconnaissance activity, with high-volume attack testing.
- Automated security alert generation with attack metadata, source information and structured JSON outputs.
- Integrated alerts with AI-assisted risk scoring and MITRE ATT&CK mapping to support threat triage and analysis.
- Validated detection logic through controlled attack simulations using common security testing tools.
- Technologies: Python, Linux, pcap, JSON, MITRE ATT&CK, API Integration, Network Security Monitoring

Master's Thesis — Zero Trust Architecture for IoMT Anomaly Detection 2026
Flinders University Research Project

- Conducting cybersecurity research into lightweight machine-learning approaches for anomaly detection in IoMT network traffic, with a focus on resource-constrained healthcare devices and cyber security resilience.
- Designing a Zero Trust Architecture framework to strengthen continuous verification and risk-based access control in healthcare networks.
- Bridging governance and risk-management principles with practical network-security design.

Business Continuity & Disaster Recovery Plan — Supply Chain Compromise

2026

Information Security (COMP9721) — Flinders University Group Coursework Project, team of five

- Developed an incident command and business-continuity structure for a supply-chain compromise, covering role accountability, regulatory notification obligations and forensic chain of custody.
- Designed a Zero Trust-aligned architecture integrating SIEM, IDS, key management and IT/OT segregation to improve containment and resilience.

Group Coursework Projects — Flinders University

2026

Cloud and Distributed Computing (COMP9033) & Full-Stack Web Development (COMP8011)

- Coordinated task allocation, milestones and deadlines across 5-person project teams, communicating progress and dependencies to keep delivery on schedule.
- **Full-Stack Web Development:** led full-stack and client-server integration for a MERN task-management application, connecting the React frontend with Node.js/Express APIs and MongoDB, and supporting final integration.
- Implemented and validated authenticated workflows using JWT, protected routes, API integration and role-based authorization.
- **Cloud and Distributed Computing:** configured AWS EC2 and IBM Cloudant for a cloud network-monitoring system, including access control, credentials and database integration.

WORK EXPERIENCE

SAP Administrator — Accenture Mauritius

Sep 2023 – Jan 2025

- Designed and implemented SAP security roles and authorisation profiles aligned with organisational security policies and access-control requirements.
- Administered identity and access controls across SAP ECC, S/4HANA and Fiori, resolving 20+ authorisation issues per month and reducing average SLA resolution time by 30%.
- Performed SAP security and access reviews, identified control weaknesses and supported remediation to reduce security and compliance risk.
- Collaborated with clients, technical teams and auditors on compliance reviews and user-access governance across Development, QA and Production environments.

QA Tester (Intern) — Total Energies Mauritius

Apr 2022 – Jul 2022

- Executed functional, regression, and scenario-based test cases.
- Documented and reported bugs, collaborating with developers to resolve security and functional defects.
- Created and maintained test scripts, improving testing efficiency and accuracy.

Gained foundational hands-on exposure to Microsoft Azure in an enterprise IT environment.
